

# I-Suite Business Community Meeting Future Enhancements

## Incident Badge Identification System

### Denver

- Incident specific badge
- Check boxes for selecting authorizations
  - Main categories and sub-categories
- Medical information
  - Allergies, meds
- Identify if person is government or contractor
- Identify if person is allowed in certain areas (Shuttle Recovery)
- T-Card info

### Atlanta

- Picture ID
- PNW Team 3 (Doug Parker), Badge system
- Pull data from IRSS
- Master ID issued at home unit, then temporary ID issued at incident, perhaps only a bar scan necessary for each incident.

### Sacramento

- Issued by agency or at incident (later probably better)
- Track shift time on and off.
- Trainee who becomes fully qualified, updates quals at the time they are signed off and approved (won't have to wait a year to get a new red card.)
- Used for security, quals, supply, check-in, demob, lunch, medical supply, laundry, fuel
- Line people may not want a badge because it would get destroyed or lost.
- If issued, should have photo and quals, with unique number (resource order number) or bar code for supply check-out and security.
- Non-red carded individuals would need to be issued a temporary incident card at the incident and would provide ID with the bar code to gain access.

## Supply Issue Module

### Denver

- Connected to ICARS
- Link with names in IRSS, on demob sheet, show items that need to be returned.
- Ability to talk with ROSS
  - Dispatch would still have the ability to override the pending supply order
- Cost of pending order displayed to Ordering Manager
- Costs included with fill info.
- Disposable goods cost automatically sent to ICARS, durable goods cost would wait until item is or is not returned.

### Atlanta

- Logistics module that includes supply, food, ground support, facilities, communications.
- Track vehicles
- Buying team costs put into ICARS
- List accountable items to person checking out supplies
- Update inventory from cache trucks
- Automatic re-order based on inventories.

### Sacramento

- System should be similar to those the rental car companies use where the unit would have a hand scanner with capability to generate a receipt. You could have a standard bar code sheet that could be scanned at issue. Download this info into the supply module on computer.
- Commitment to warehousing
- Mini-cache system
- All supplies including medical, radios, ground support, facilities/logistics.
- For contract crews who are charged back for supplies, bar code card could be liked to debit/credit in ITS>

## I-Suite Business Community Meeting Future Enhancements

### Fax/Data Export

#### Denver

- Batch capabilities
- Single button sends
- Check-in sheet will need to collect fax number
- Encrypted fax
- Ability to send:
  - IAP
  - Time sheets
  - Cost reports
  - Resource travel info to dispatch

#### Atlanta

- Able to export to specific programs: Word, browsers, spreadsheets
- E-mail is preferable, will need to get fax number and e-mail address in IRSS
- Ability to open IAP into Word or a .rtf format.
- Ability to export 204 into Word.

# I-Suite Business Community Meeting Future Enhancements

## Sacramento

- Fax option button would bring up screen with options:
  - Create cover sheet with fax number and attention to: and comments
  - Individuals: current screen
  - Fax whole group selected
  - Everyone from same fax number. (With check capability to deselect or select in roster list that is generated by fax number).
- Export option so you can download and fax from remote area if no capability from incident.
- Batching reports
- Multiple destinations
- Audit trail
- Failure reports
- Transmission logs
- Option to retransmit failures
- Export entire OF 288
- Cost report data
- AD payments to payment center
- Link from ITS to a fax that faxes agency time sheets. Also could work in ICARS for daily costs as well as obligation reports.

# I-Suite Business Community Meeting Future Enhancements

## Data Import

### Denver

- ROSS
  - Other quals, perhaps only priority quals?
  - Would like all information imported, so that SCKN only has to input date/time resource checked in.
- FAA Airports
- Teams
- IQS/IQCS
- Payroll

### Atlanta

- ROSS Import: each time you download, should only give you updated data, not all the data.

### Sacramento

- Rates – geographic area, states, etc.
- EERA – rates, charts
- Agreements (land use, coop, agency rates, etc.)
- Analysis report to BAER/ESR
- Value at risk info from NFP's – FPA's
- USDA info
- ROSS and generic CAD
- Standard field sizes
- Common delimited fixed width
- XML format
- Accept all or review individuals
- Aircraft cost
- Regional equipment rates
- I-9
- Supply plan link
- Air ops costs for helicopters and fixed wing aircraft
- MIRPS

# I-Suite Business Community Meeting Future Enhancements

## Actual Help System

### Denver

- Within program, not internet based
- 'Show Me' options
- Index/Keywords
- Ability to go to a specific item in User Guides (i.e., graphs)
- On-line tutorials for applications or specific subjects

### Atlanta

- On-line help like ROSS page.
- Contextual help; right click on an item for info
- Integrate guides into I-Suite
- Tutorial program, practice program that will step you through different processes.

### Sacramento

- Context help pulled with right click on function.
- I-Suite user guides applicable material
- Help desk updates accessible from help menu
- Link to Bugs and Tips index help menu
- Content, Index, Search, Keyword

## Future Enhancements

### **Security**

#### **Denver**

- Unique identification for resource, no longer use the SSN.
- Define users in admin tools, incident specific but has simple default for single or non-tech users
- Track who posts/enters information (accountability)

#### **Atlanta**

- User names/passwords and program use tracking.
- No 'delete' key or a restrictive 'delete' key
- Screen lock: if a user leaves computer area, he/she can quickly secure the computer by pressing on a function key.

#### **Sacramento**

- Security lock/password to download on to an external site/disk,etc., to delete entire database, to Admin functions, (with a log on who has been there and done what.)
- Each function has an individual password log on.
- Access to program by badge insert (like the DOI is going with)
- Access controls and roles
- Audit trail NOT required.
- Wireless – somehow secure
- Password by functional area.
- Fine how it is.

## Future Enhancements

### Bar Coding

#### Denver

- Fuel/oil scan on ID badge
- Supply scan
- Commissary scan
- Food scan

#### Sacramento

- Plans for badges – will have bar code equipment to generate code and bar code sheets standard issue for supply units.
- Readers at caterer, commissary, security, supply, commo, fuel tender, medical unit.
- Totally automate 221 with bar code reading at each station.
- EERA Info
- Smart cards for contractors (agency-issued) that has all contract data that will auto-fill in ITS.
- 

### Demob Module

#### Atlanta

- Create module to automate demob process; look for common localities, track airline information, rentals, etc. Feed expanded
- Paperless demob would automatically determine where you have to go based on items you checked out.
- Time travel auto loads into ROSS.

#### Sacramento

- Auto print 221 only with locations person needs to visit. Screen would show if went to supply or commo for a radio. If did, then check would be on 221.
- Need to look at Michael Morgan's demob program, add to system.
- Auto fax demob 221 sheet or just travel data to expanded dispatch as menu item.
- Auto create more poster type lists of demobs. Take tentative demob info – make list, print poster size or large font so we don't have to mess with print options.
- Better automated way to receive and send airline travel data and request to expanded dispatch. Auto fax request and auto fax back reservations. (similar to Omega and Sato)

## I-Suite Business Community Meeting Future Enhancements

### Other

#### Atlanta

- Electronic signatures for timesheets
- New module to track where individuals are on an incident, in case of a need to account for people.
- PDA data collection: mobile I-Suite application that can be used for remote check-in, supply, etc.
- Camp e-mail system for general messages
- Payments sent to paycheck program for home unit
