Description

The Travel Plan module is used to create travel for transport resources. A transport resource is an item, such as an aircraft or a bus, which can be used to transport other resources. A transport resource does not have to be a resource item in ROSS nor does it have to be assigned to an incident.

The Travel Plan module is used to document the movement of a transport resource (i.e., a resource from the Aircraft or Equipment catalogs that can carry passengers). A detailed travel plan, consisting of travel plan legs, can be created. Traveling resources can be added to one or more legs of a travel plan. These travel plan legs become part of the resource's travel itinerary (see *Travel module information*).

The Travel Plan Module is utilized by ROSS users with the role of Dispatcher.

ROSS Module Summary

Travel Plan

The Travel Plan module is related to the Travel, Location, Airport, Organization, Resource Item, Roster, Incident, Pending Request, and Incident Resources modules as well as other components of the ROSS Program.

Data Information:

	Data Definition
Resource Item	Name or call sign of the transportation resource (e.g., 153Z, A19456, Bus 12)
Incident Name and Incident #	Name and order number of the incident. Not required if the transport resource is not assigned to an incident.
Request #	Catalog designator (E or A) and sequential number assigned to the transport resource. Required only if the resource is assigned to an incident.
Travel Mode	Method of travel (i.e., air, ground, water or other).
Travel Type	Category of transport ownership (i.e., government, commercial or private).
ETD	Estimated time of departure for the first leg of the Travel Plan. Auto-filled.
ETA	Estimated time of arrival for the last leg of the Travel Plan. Auto-filled.
View <i>button (upper panel)</i>	Allows user to View Resource and View Home Dispatch Unit.
Travel Plan Travel Legs	Segments of the travel plan consisting of departure location and date/time, destination location and date/time. Fuel stops may be indicated as well as cargo weight and cubic feet.
Total Weight (lbs)	This is the total weight in pounds for the selected leg of the Travel Plan. This includes passengers, baggage (65 lbs) and cargo. If available, passenger weight is read from the Resource Item module and can be edited.
Action <i>button(middle panel)</i>	Allows users to Add, Edit, or Delete Travel Plan Leg, Add Traveling Resource, Add Administrative Passenger, and Add Untracked Supply+.
Traveling Resources	A resource filling an incident request that has a travel itinerary and/or an administrative passenger (ROSS or non-ROSS) <u>not</u> assigned to an incident.
