

ROSS Module Summary

Merge Resources

Description

The Merge Resources module allows Data Managers to merge duplicate Resource Items into a remaining Master Record. The Merge Resources screen is under the Administration menu.

Users may only merge resources managed by their center. All items selected for a merge must be from the same Catalog and category. The status of items selected for a merge must be Unavailable or Available (*at home – not on a prepositioned incident*). If any overhead resources being merged were imported then the selected Master Record **must** be an imported record (rather than a hand-entered record). The assignment history of all merged resources is copied to the surviving master record. Overlapping histories are permitted. Merged resources are physically deleted from the database.

ROSS Module Summary

Merge Resources

The Merge Resources module is related to the Resource Item, Resource Status, and Import modules and the Web Status interface.

Data Information

Data Element	Data Definition
Catalog	A list of resource items grouped by Aircraft, Crews, Equipment, Overhead, and Supply. <i>Required field.</i>
Category	A list subdividing a given Catalog. For example, the Equipment Catalog includes the Engine and Dozer categories. <i>Required field.</i>
Catalog Item	The various items within a Catalog Category (e.g., Helicopter → Type 3 Standard).
Resource Name	The name or call sign of an individual resource item (e.g., ENGINE - T6 - 42). For Overhead resources, the Last Name field must be completed or a wildcard search performed before filtering. <i>Required field.</i>
Alternate Name	Another name, which has been entered in the Resource Item screen, to identify a resource.
Status	A filter option. Some examples to filter by Status include: At Incident; Available; Mob En Route; and Unavailable.
Resources to Merge	Duplicate resources from the search result that are to be merged.
Master Record	The resource that will remain and become the 'Master Record.'
