## Description

Dispatch Centers use the Resource Status module to view and maintain the status of the resources they dispatch, including pre-positioned resources.

The module allows a dispatch center to update the status of unassigned resources to available or unavailable and to set the area of availability to GACC, local, or national. Unavailability periods may be created or edited. The search function can be used to find a resource by name or to display resources that have a given qualification or classification (e.g., DIVS or Type 6 Engine).

# ROSS Module Summary

## Resource Status

To facilitate statusing of unassigned resources ROSS offers the user with many filtering options. The only required filter is resource type (e.g., aircraft, crews, equipment). Additional filters include resource provider, vendor, and current status. The filtered resources may be displayed by provider, home unit or owner. Dispatchers may set the status and the area of availability of one or more resources at a time.

Filtering by incident and a status to view of 'assigned' allows Dispatchers to quickly determine the location and status of resources on incidents. Very specific questions can be answered such as which assigned overhead resources have a status of tentative release, released, or demob-in- route. When the ETA of a released resource has passed, ROSS sets the status to Returned from Assignment.

ROSS users with the role of Dispatcher or Resource Status utilize this module to view and update resource status. Basic Users can view status information via the Reports module.

This module is related to User Accounts, Organization, Resource Item, Pending Request, Request Status, and Reports modules.

## Data Information

| Data Element                                     | Data Definition  |
|--|--|
| Resource Type                                    | The ROSS catalog group (e.g., aircraft, crews, and equipment). <i>Required filter.</i>   |
| Non-Qualified Resources Only<br><i>check box</i> | When checked, will filter for resources with either no qualification, classification, or equipment type.   |
| Select Provider                                  | A filter for an organization that provides resources (e.g., TN-CNF). The 'CWN/Agreement' option filters for contracted resources. Default is 'All'.  |
| Select Vendor                                    | A filter for the current dispatch center's vendor-owned resources. Default is 'All'.   |
| Select Incident                                  | A filter for the current dispatch center's resources that are assigned to a particular incident. Default is 'All'.   |
| Status to View                                   | A filter that displays the current dispatch center's resources that match the selected value (e.g., Available). The choice of 'Assigned' includes additional filters (e.g., mob-in-route, at incident, tentative release). |
