ESR 2006	UT-SLD-000014	02/09/2006 12:51	MST	UT-NUC	

## Description

The Incident List module allows users to create a list of Local Incidents that may be of particular interest and allows them to add local Incidents to their Most Recent Incidents dropdown list. A local Incident is one created by your organization, and may be internal or external. The Incident List screen can be accessed on the **Incident** menu or by clicking the **IL** hot button.

Under the **Filter Criteria for Incidents**, type into or select information for as many boxes as possible to narrow your search. Incidents that meet your filter criteria display under **Incidents Meeting Criteria**.

Adding Incidents to **My Incident List** has no impact to any other ROSS functions or screens. Its only use is to help you quickly view and organize Incidents that are of particular interest.

# ROSS Module Summary

## Incident List

The Incident Lists module is related to the New Initial Report or Incident, Organization, and Incident modules.

### Data Information:

Data Element	Data Definition
Incident Status	Open or Closed Incident for which to filter.
