

Analytical Reports - using Cognos Query Studio

Query Studio allows you to create your own custom reports. Unlike the Data Delivery System (DDS) that Query Studio will eventually replace, your report will contain data current to the time you run report. You can modify the look of your report by creating a Crosstab report or chart, filter for and/or manipulate report values, and perform calculations on quantitative report values. Topics include:

- Getting started
- Creating, running, and saving a report in Query Studio
- Manipulating report values
- Changing the look and feel of your Query Studio report
- Working with Crosstab reports and charts.

Not everyone has access to Query Studio. For more information, go to the ROSS web page at <http://ross.nwcg.gov>

To start Query Studio from ROSS

To access Query Studio from the NWCG website see the next task, "To access Query Studio from the NWCG website."

- 1 On the **Administration** menu, click **Reports**.
- 2 From the **Cognos Connection** screen on the **Public Folders** tab, click to select the **Launch Query Studio** link.

The following diagram shows the Public Folders in Cognos. The arrow points to the Launch Query Studio link.

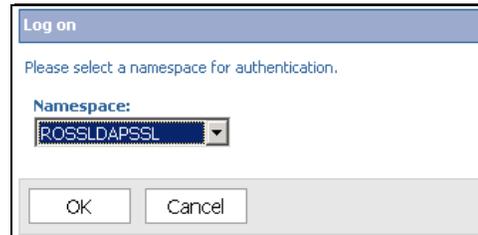

To access Query Studio from the NWCG website

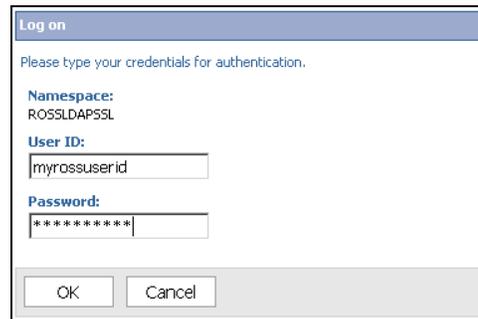

- 1 Start your Internet browser.
- 2 In the **Address** bar, type **http://rossreports.nwcg.gov/cognos/c8/cgi-bin/cognos.cgi** and then press [ENTER].
- 3 On the **Log on** screen, click the **Namespace** drop-down arrow, click to select **ROSSLDAPSSL**, and then click **OK**.

- 4 On the **Log on** screen, perform the following and then click **OK**
 - Under **User ID**, type your **ROSS user ID**
 - User **Password**, type your ROSS password.
- 5 On the **Cognos Connection** screen on the **Public Folders** tab, click the **ROSS** link, and then click to select the **Launch Query Studio** link.

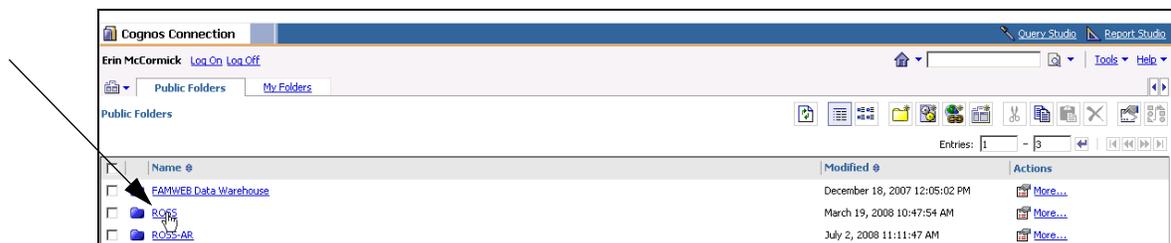

The following diagram shows the initial Log on screen.

The following diagram shows the User ID and Password text boxes on the Log on screen.

The following diagram shows the Public Folders tab on the Cognos Connection screen. The arrow points to the ROSS link.

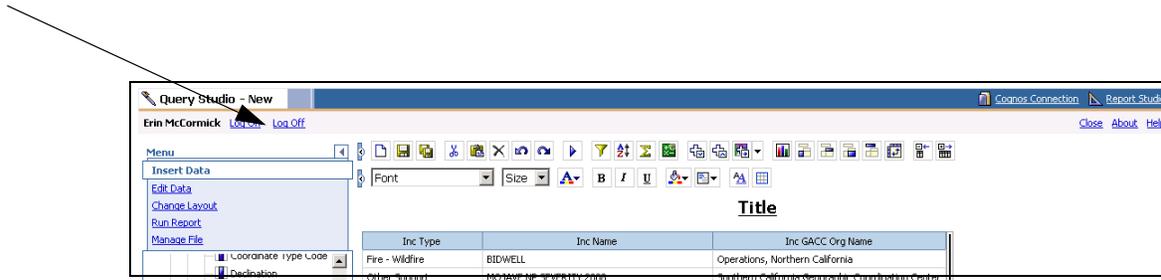

To log off Query Studio

To prevent unauthorized persons working in your Cognos profile you must close your Cognos Internet Explorer session. This is basic security protocol similar to logging out of ROSS, to prevent unauthorized use of your ROSS profile.

- On the **Cognos Connection** toolbar, click the **Log Off** link, and then click **OK**.

The following diagram shows the Cognos Connection toolbar. The arrow points to the Log Off link.

Getting started

This section explains the terminology and functionality in Query Studio. This section also outlines the toolbars, menu, and submenus you will use while creating, running, and saving your reports. Topics include:

- Understanding Query Studio terminology and functionality
- Understanding Query Studio toolbars
- Understanding the Query Studio Menu and submenus.

Understanding Query Studio terminology

Some of the basic terminology when creating reports in Query Studio includes:

- **Analytical Reporting System Data Dictionary.** The Analytical Reporting System Data Dictionary contains the definitions of the data elements used in Cognos. Located on the ROSS web site under “DDS/ Analytical Rpts, it allows you to obtain information on how subject areas can relate to each other.
- **Cascading Filter.** A cascading filter is a pre-defined filter that filters for multiple report items. The filters are listed in sequence, where the first report item is the first filter performed, and the last report item is the last filter performed. Selections made at each level of the filter also filters the selections available at lower levels of the filter. Cascading filters are listed under the corresponding subject area on the Insert menu.

For example, if you select a filter for the Overhead catalog, only categories appropriate to the Overhead catalog display as selections for the next level of filter. For more information about using cascading filters see, “To add a cascading filter to your report,” in the section, “Working with filters,” later in this chapter.

- **Drop Zone.** The drop zone is where you place selected query items when building your report. You can move query items into the drop zone by performing one of the following
 - double-click the query items in the order you want to view them in your report

- drag and drop query items in the order you want to view them in your report
- press and hold CTRL, click to select the query item(s) in the order you want to view them in your report, and then click the Insert button.

For more information about cutting and pasting columns see, "Changing the look and feel of your Query Studio report," later in this chapter.

- **Independent Subject Areas.** This folder contains subject areas that were built to "stand alone." Their query items may not be combined with query items from other subject areas.
- **Integrated Subject Areas.** This folder contains Incidents, Request, and Resources query subjects. These subject areas are classified as "integrated" because relationships exist between the underlying data structures in these subject areas. This allows you to select and combine query items from different subject areas into a single report.

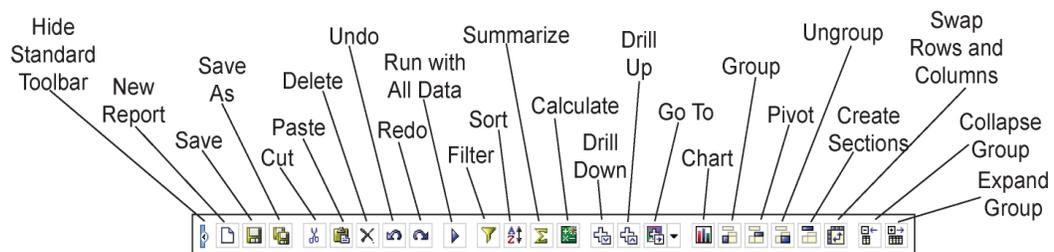

For example, you can create a report using query items from the Incident subject area and the Incident query subject, and query items from the Request subject area and Request query subject.

- **Query Item.** A query item is an individual field in the query subject (source). It is the lowest level of information. Once you add a query item to the drop zone it becomes a "report item."
- **Report Item.** A report item is a query item you added to your report by adding it to the drop zone. In a List Report, report items are listed in columns, with the report item names listed as the column headings. By default, when adding a report item to your report, the report item is added as the next column.
- **Report Value.** A report value is the information returned from the database to an individual cell in a column or row.

Understanding Query Studio toolbars

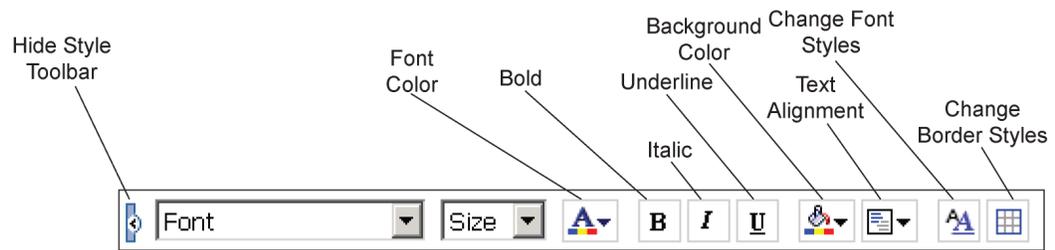

The buttons on the Query Studio Standard toolbar allow you to manipulate the data and change the appearance of your reports.

Query Studio Standard toolbar.

The buttons on the Query Studio Style toolbar allow you to change the font style and color, the background color, and border style of your report.

Query Studio Style toolbar

Understanding the Query Studio Menu and submenus

When creating a report in Query Studio, the Query Studio Menu displays along the left-hand side of your screen. There are five submenus on the Query Studio Menu, including:

- Working with the Insert Data submenu
- Working with the Edit Data submenu
- Working with the Change Layout submenu
- Working with the Run Report submenu
- Working with the Manage File submenu.

Working with the Insert Data submenu

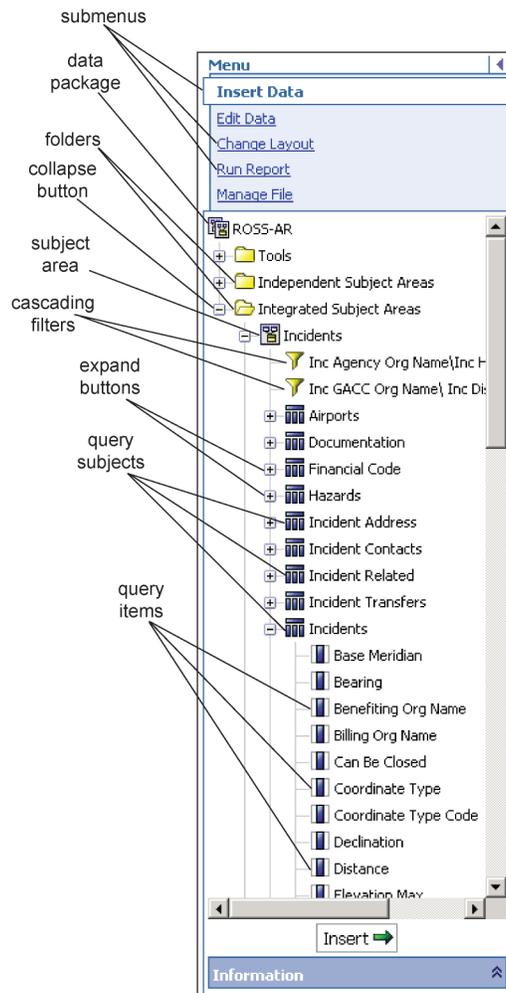

The Insert Data submenu automatically displays whenever you create a report using Query Studio. This submenu allows you to locate and move query items into the “drop zone.”

To locate query items on the Insert Data submenu

- 1 Under **Menu**, click **Insert Data**.
- 2 Click the **expand** button for the **subject area** of your choice, and then click the **expand** button for the **query subject** of your choice.
- 3 Click the **expand** button for the **dimension** of your choice.
- 4 Scroll to locate the **query items** of your choice.

For more information about using Query Studio see, “Creating reports from Query Studio,” later in this chapter.

The following diagram shows the Insert Data submenu, options, and terminology.

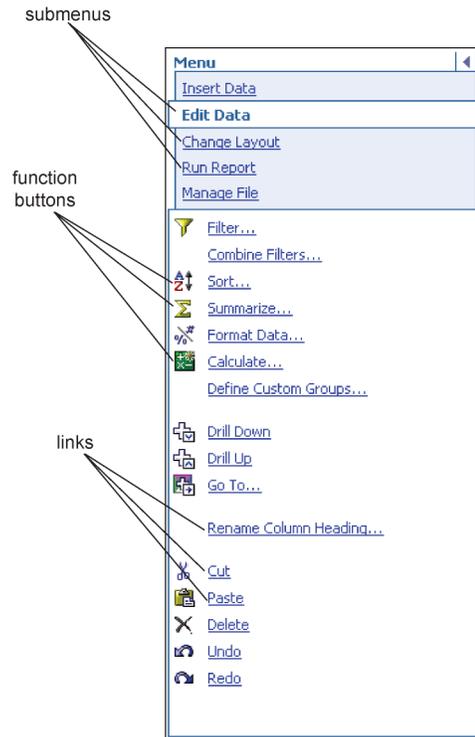

Working with the Edit Data submenu

The Edit Data submenu displays when using Query Studio to edit and/or manipulate data in your Query Studio reports. You can perform one or more of the following functions:

- filter text, numbers, and date and time data
- filter for missing values for quantitative data
- sort data
- calculate quantitative data
- summarize report values.

For more information about using Query Studio see, "Creating reports from Query Studio," later in this chapter.

The following diagram shows the Edit Data submenu, options, and terminology.

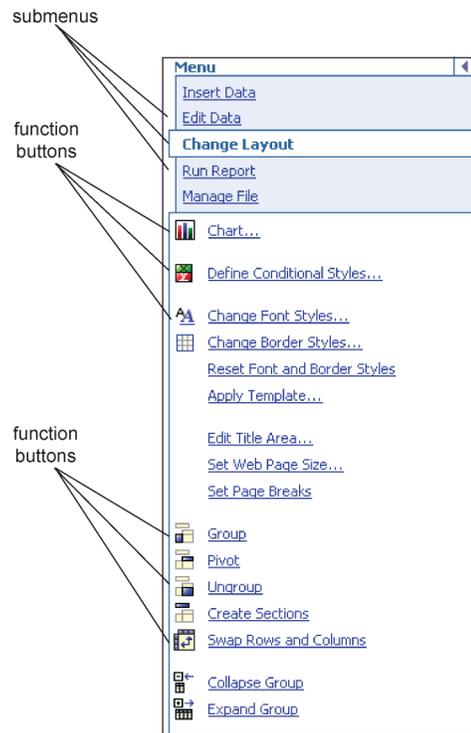

Working with the Change Layout submenu

The Change Layout submenu allows you to customize the format of your Query Studio reports. You can perform one or more of the following functions:

- create sections and subsections within the report
- create groups and subgroups of report values
- add or change border styles
- change font styles, set page breaks and create a Crosstab report.

The following diagram shows the Change Layout submenu, options, and terminology.

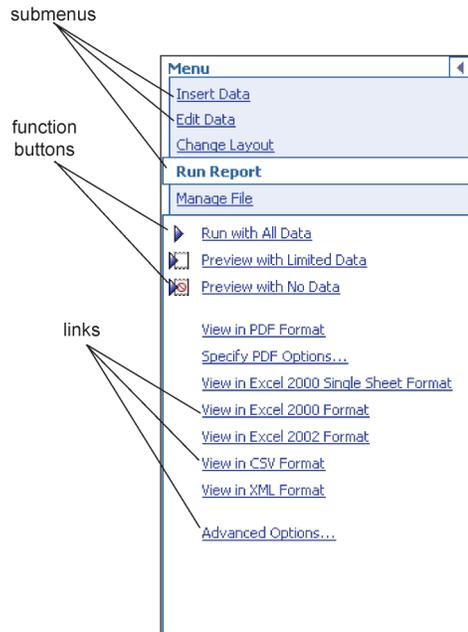

Working with the Run Report submenu

The Run Report submenu allows you to preview your report using just some of the data. The Run Report submenu also allows you to specify the file format of your report. You can save your report in the following formats:

- Adobe PDF, to save the report as it appears on your screen - *default*
- Microsoft Excel, to save the report as a spreadsheet
- CSV, to save the report using commas that separate the tabular data
- XML, to save the report for sharing on the Internet.

For more information see, "Running reports in other formats," later in this chapter.

The following diagram shows the Run Report submenu, options, and terminology.

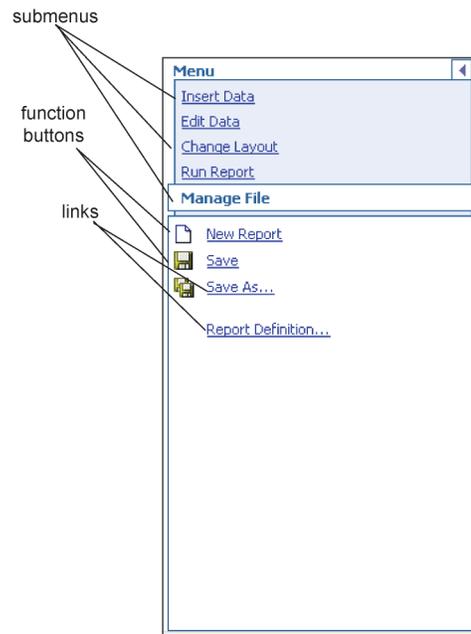

Working with the Manage File submenu

The Manage File submenu allows you to create and save new Query Studio reports. It also allows you to view the report definition (origination) of each report item in your report.

For example, the report item "Inc Disp" has a report definition of [Incidents].[Incidents].[Inc Disp Org Unit Code]. This means that Inc Disp originates from the Incidents subject area, the Incidents query subject, and the Inc Disp Org Unit Code query item.

The following diagram shows the Manage File submenu, options, and terminology.

Creating, running, and saving a report in Query Studio

When you place query items into the drop zone, Query Studio instantly returns reports values. Once moved into the drop zone, query items are called “report items.” There are three ways you can add query items into the drop zone:

- Double-click each query item, in the order you want listed in the report.

The solid, blinking black line that displays in the drop zone indicates where the query item will be placed. By default, each new query item is added as the next column.

- Drag and drop each query item into the drop zone, positioning each query item where you want it listed in the report.
- Click to select one or more query items in the order you want them to be listed, and then click the Insert button.

To create and run a report in Query Studio

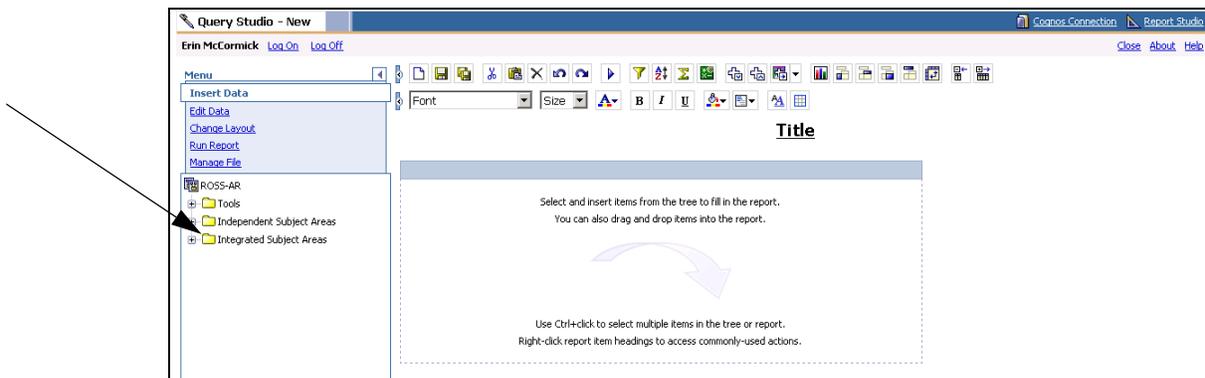

- 1 On the **Query Studio** toolbar under the **Insert Data** submenu, click to select the **folder** of your choice.
- 2 Click the **expand** button for the **subject area** of your choice.
- 3 Click the **expand** button for the **query subject** of your choice.

- Click or drag and drop the **query items** of your choice into the **drop zone**.

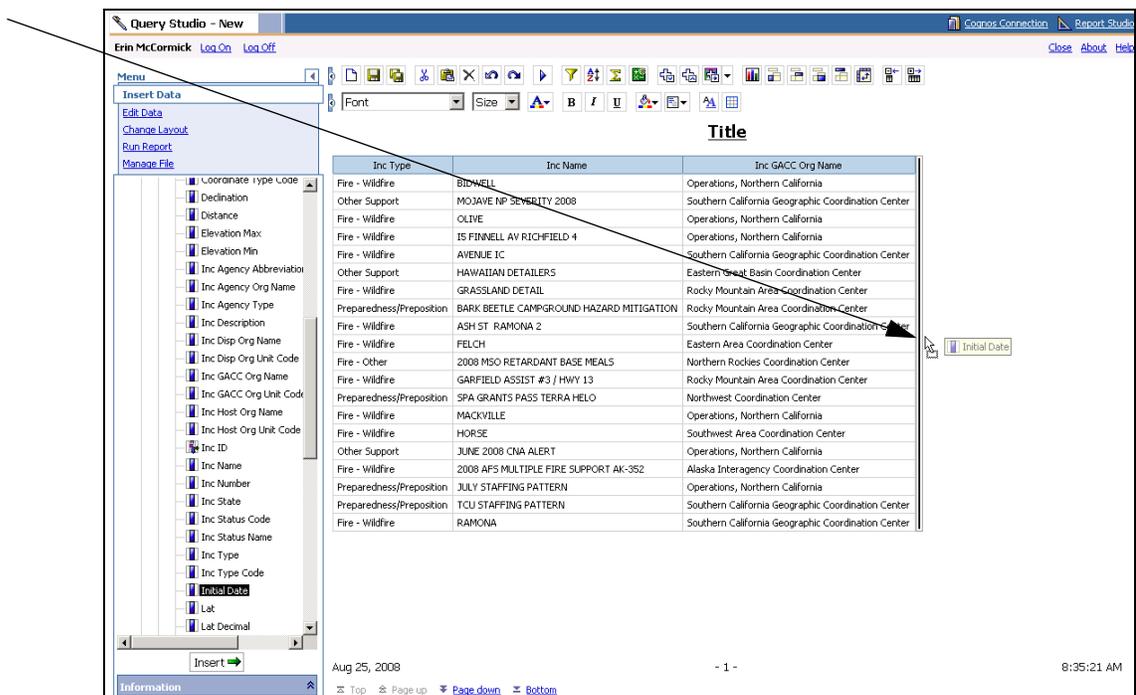

*You can also click to select the query item(s) of your choice, and then click the **Insert** button.*

- To name the report, click **Title**, and then complete the **Title** and **Subtitle** boxes on the **Edit Title** screen.
- On the **Edit Title** screen, click the **Show filters** and **Show sorts** check boxes as appropriate, and then click **OK**.

The following diagram shows the Insert Data submenu. The arrow points to the Integrated Subject Area subject area folder.

The following diagram shows the progress of a report being developed in Query Studio. The arrow points to the position where "Incident Date" is about to be placed.

The following diagram shows the Edit Title screen.

The following diagram shows a simple Query Studio report.

Inc Type	Inc Name	Inc GACC Org Name	Initial Date
Other Support	SJPL DETAIL	Rocky Mountain Area Coordination Center	5/2/08
Fire - Wildfire	HITCHCOCK	Operations, Northern California	6/20/08
Fire - Wildfire	WEST	Southwest Area Coordination Center	6/22/08

To save a Query Studio report

- 1 On the **Query Studio Standard** toolbar, click the **Save** or **Save As** button.
- 2 On the **Save As** screen, complete the following text boxes and then click **OK**
 - Name
 - Description
 - Screen Tip.

Be sure to save your report to My Folders.

The following diagram shows the Save As screen. The arrow points to My Folders, where the report will be saved.

Manipulating report values

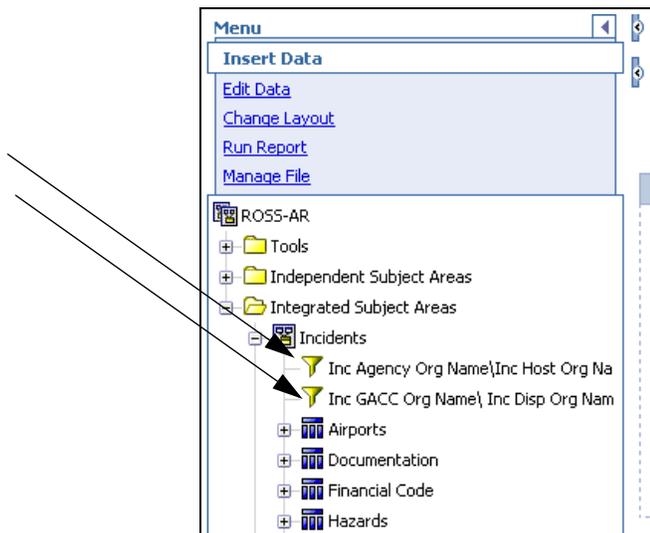

The Edit Data submenu allows you to manipulate both qualitative and quantitative data. Topics include:

- Working with filters
- Performing searches
- Sorting, grouping, summarizing, and calculating.

Working with filters

This section explains how to use filters in Query Studio. You can use cascading filters and/or develop your own to create a report that displays only the data you need.

The following diagram shows a portion of the Insert menu. The arrows point to two cascading filters available for the Incidents subject area.

To add a cascading filter for your report

*Cascading filters do not automatically refresh the data. To keep the data in your report current, save the report in My Folders and run the report again, or click **Run with All Data** from the **Run Report** submenu.*

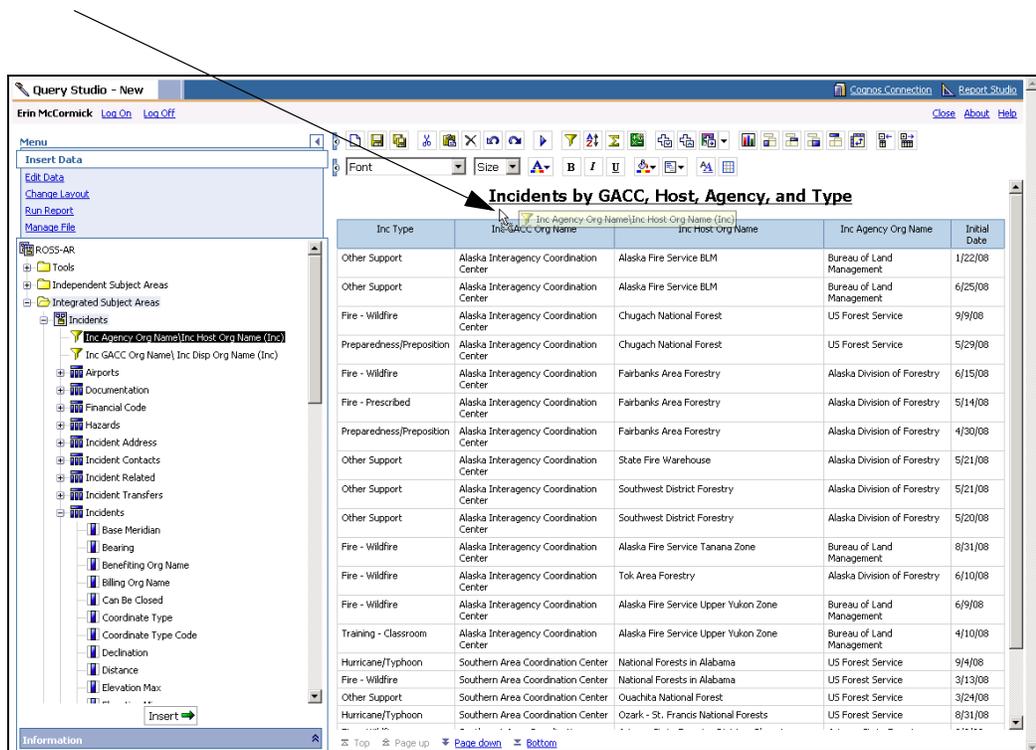

Reprompt

- 1 On the **Cognos Query report** of your choice, click the **Insert** menu.
- 2 Drag-and-drop the **cascading filter** of your choice into the **drop zone**.
- 3 On the **Prompt** screen that displays for your report, click to select the **first set of values** in the **Provide a value** list box, and then click the **Reprompt** button.

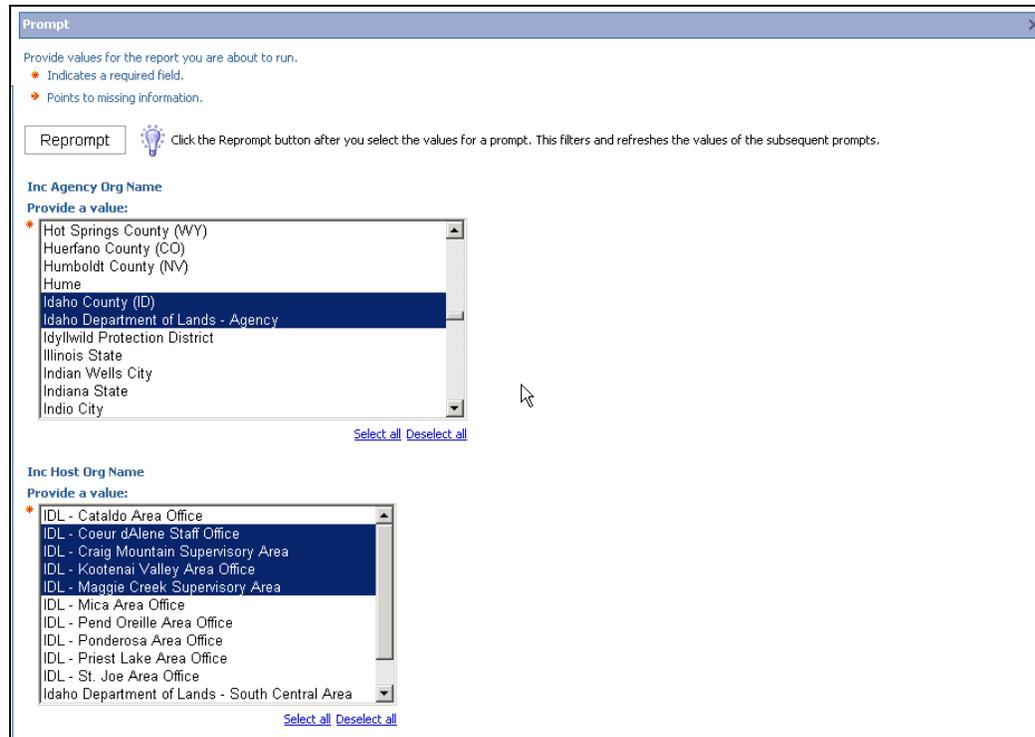

To select more than one value at a time, click and hold [CTRL], and then click to select the values of your choice.

- 4 Click to select the next set of values, clicking the **Reprompt** button after each selection, and then click **OK** when finished.

The following diagram shows a sample report. The arrow points to a cascading filter being inserted into the drop zone.

The following diagram shows a sample Prompt screen.

The following diagram shows the resulting report after the cascading filter is applied.

Fire - Wildfire	Northern Rockies Coordination Center	IDL - Kootenai Valley Area Office	Idaho Department of Lands - Agency	8/9/08

To display filter subtitles

- 1 On the **Query Studio** report of your choice, click the **Title** of the report.
- 2 On the **Edit title area** screen, click to select the **Show filters** check box.

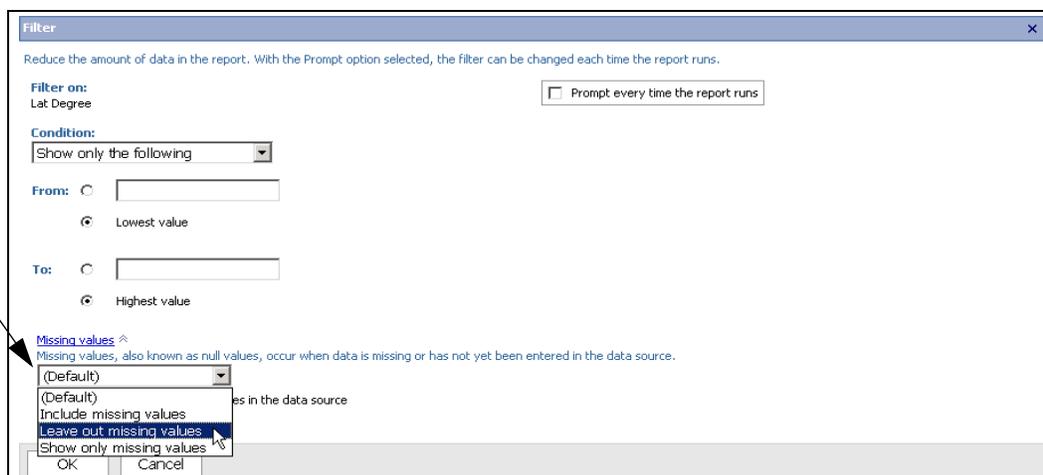

The following diagram shows the Edit title area screen. The arrow points to the Show filters check box.

To filter for missing report values

- 1 Create the **Query Studio** report of your choice.
- 2 Under **Menu**, click the **Edit Data** submenu.
- 3 Click to select the **column heading** of your choice, and then click the **Filter** link.
- 4 On the **Filter** screen, click the **Missing Values** link, and then click the **Missing Values** drop-down arrow.
- 5 Click to select the **option** of your choice.
- 6 Click to select the **Apply the filter to individual values in the data source** check box, as appropriate, and then click **OK**.

The following diagram shows the Filter screen. The arrow points to the Missing Values link.

To filter for missing report values - an example

This example explains how to filter for missing Contract Start Dates and Contract End Dates. You can create a report that shows only these missing or "null" report values.

- 1 Create the **Query Studio** report of your choice.

This example lists Contract Number, Contract Type, Contract Start Date, Contract End Date, and Contract Org Name.

- 2 Under **Menu**, click the **Edit Data** submenu.
- 3 Click to select **Contract Start Date**, and then click the **Filter** link.
- 4 On the **Filter** screen, click the **Missing Values** link, and then click the **Missing Values** drop-down arrow.
- 5 Click to select **Show only missing values** click to select the **Apply the filter to individual values in the data source** check box, as appropriate, and then click **OK**.

Repeat the filter for Contract End Date to be certain you filtered for all missing values.

The following diagram shows a sample report. The arrow points to the Contract Start Date, which will be filtered for missing values.

Contracts with Missing Start and/or End Dates

Performing searches

This section explains how to perform a search for report values using the Filters button and the Filters (Search for Values) screen. The Filters (Search for Values) screen allows you to define search criteria for report values, including the following:

- **Keywords text box.** Type one or more keywords for your search of report values. Separate each keyword by a space.

- **Search button.** Click the Search button to perform a search using the Keywords, Options, and Case insensitive check box criteria. Search results display in the Results text box.
- **Options link.** Click the Options link to narrow the keyword search using one of the following keyword criteria
 - Starts with any of these keywords
 - Starts with the first keyword and contains all of the remaining keywords
 - Contains any of these keywords
 - Contains all of these keywords.
- **Case insensitive check box.** Click to select the Case insensitive check box to specify that upper and lower-cased text is not used as part of the keyword search criteria.
- **Results text box.** This text box displays search results from the Keywords, Options, and Case insensitive check box criteria. Click to select one or more of the report values in the Results text box, and then click the Insert button to add these report values to the Conditions text box.
- **Missing values link.** Click the Missing values link to search using one of the following missing values criteria
 - Include missing values
 - Leave out missing values
 - Show only missing values.
- **Apply the filter to individual values in the data source check box.** Click the Apply the filter to individual values in the data source check box to specify that individual report values will be filtered using the missing value criteria.
- **Insert button.** Select the report value(s) from the Results text box, and then click the Insert button to move report values to the Condition text box.
- **Remove button.** Select the report value(s) from the Condition text box, and then click the Remove button to move report values back to the Results text box.
- **Condition drop-down arrow.** Click the Conditions drop-down arrow to specify one of the following options
 - Show only the following
 - Do not show the following (NOT).
- **Conditions text box.** The Conditions text box lists resulting report values to be either included or excluded from your report.

To search for report values you specify

- 1 Create the **Query Studio** report of your choice.
- 2 Click to select the **column heading** of your choice, and then click the **Filter** button.

*If viewing your report from the **Edit** submenu, you can click the **Filter** link.*

- 3 On the **Filters (Pick values from a list)** screen, click the **Search for Values** link.
- 4 On the **Filter (Search for Values)** screen, complete the following as appropriate for the search, and then click the **search** button
 - Keywords
 - Options
 - Case insensitive
 - Missing values
 - Apply the filter to individual values in the data source.

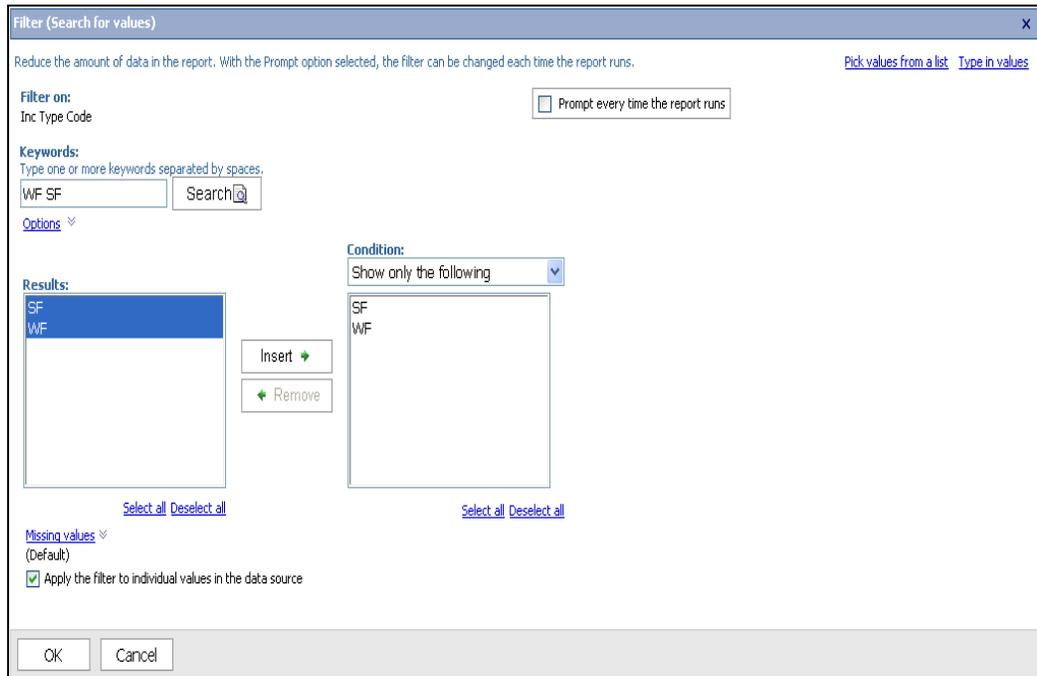

- 5 Under **Results**, click to select the **report value(s)** of your choice, and then click the **Insert** button.
- 6 When finished, click **OK**.

To filter report values by picking from a list

- 1 Create the **Query Studio** report of your choice.
- 2 Under **Menu**, click the **Edit Data** submenu.
- 3 Click to select the **column heading** of your choice, and then click the **Filter** link.
- 4 On the **Filter (Search for Values)** screen, click the **Pick values from a list** link.
- 5 On the **Filter (Pick values from a list)** screen, click the **Condition** drop-down arrow, and then click to select the **condition** of your choice.
- 6 Click to select the **report values** of your choice, and then click **OK**.

The following diagram shows the Filter (Search for Values) link on the Filter (Search for Values) screen. The arrow points to the Pick values from a list link.

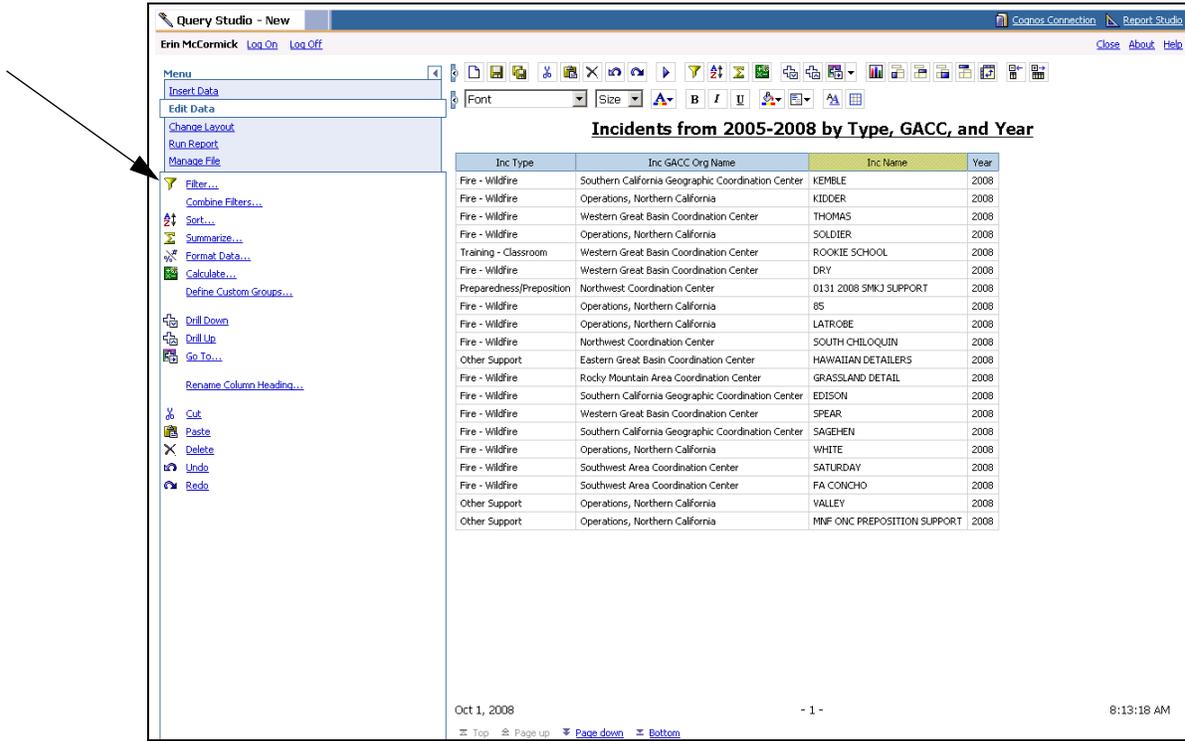

The following diagram shows a sample Filter (Pick values from a list) screen.

To filter report values by typing your own list

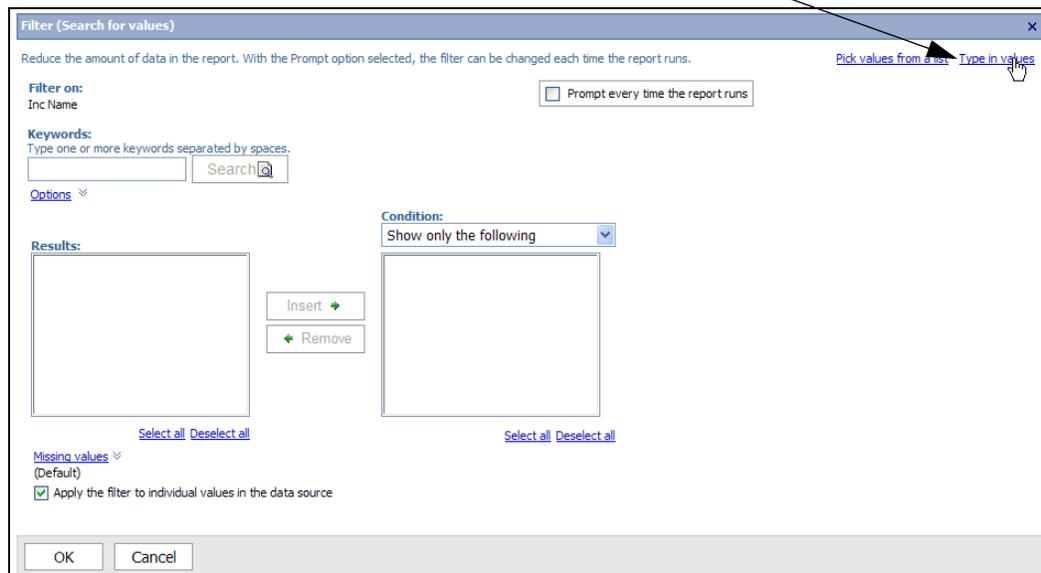

Report values are case-sensitive and must be an exact match. You cannot use wildcards.

- 1 Create the **Query Studio** report of your choice.
- 2 Under **Menu**, click the **Edit Data** submenu.
- 3 Click to select the **column heading** of your choice, and then click the **Filter** link.
- 4 On the **Filter (Search for Values)** screen, click the **Type in values** link.
- 5 Click the **Condition** drop-down arrow, and then click to select one of the following conditions
 - Show only the following
 - Do not show the following (NOT).
- 6 On the **Filter (Type in values)** screen under **New value**, type the **report value** of your choice to match the **condition**, and then click the **Insert** button.
- 7 Click to select the **report values** of your choice, and then click **OK**.

The following diagram shows a sample report with Inc Name selected. The arrow points to the Filter link.

The following diagram shows the Filter (Search for Values) link on the Filter (Search for Values) screen. The arrow points to the Type in values link.

The following diagram shows the Filter (Type in values) screen. In this example Inc Names, “BENSON” and “NORTHWOODS,” will be filtered out from your report.

Filter (Type in values)

Reduce the amount of data in the report. With the Prompt option selected, the filter can be changed each time the report runs. [Pick values from a list](#) [Search for values](#)

Filter on:
Inc Name Prompt every time the report runs

New value: NORTHWOODS

Condition: Do not show the following (NOT)

BENSON

Missing values
(Default)
 Apply the filter to individual values in the data source

The following diagram shows the resulting report after the filter is applied.

Incidents from 2005-2008 by Type, GACC, and Year

Inc Name: [BENSON, NORTHWOODS](#)

Inc Type	Inc GACC Org Name	Inc Name	Year
Fire - Wildfire	Operations, Northern California	BENSON	2008
Fire - Wildfire	Southwest Area Coordination Center	BENSON	2008
Fire - Wildfire	Operations, Northern California	NORTHWOODS	2008

Sorting, grouping, summarizing, and calculating

This section explains how to sort and group report values, summarize report values, and perform calculations on report values in your report.

To display sort subtitles

- 1 On the **Query Studio** report of your choice, click the **Title** of the report.
- 2 On the **Edit title area** screen, click to select the **Show sorts** check box.

The following diagram shows the Edit title area screen. The arrow points to the Show sorts check box.

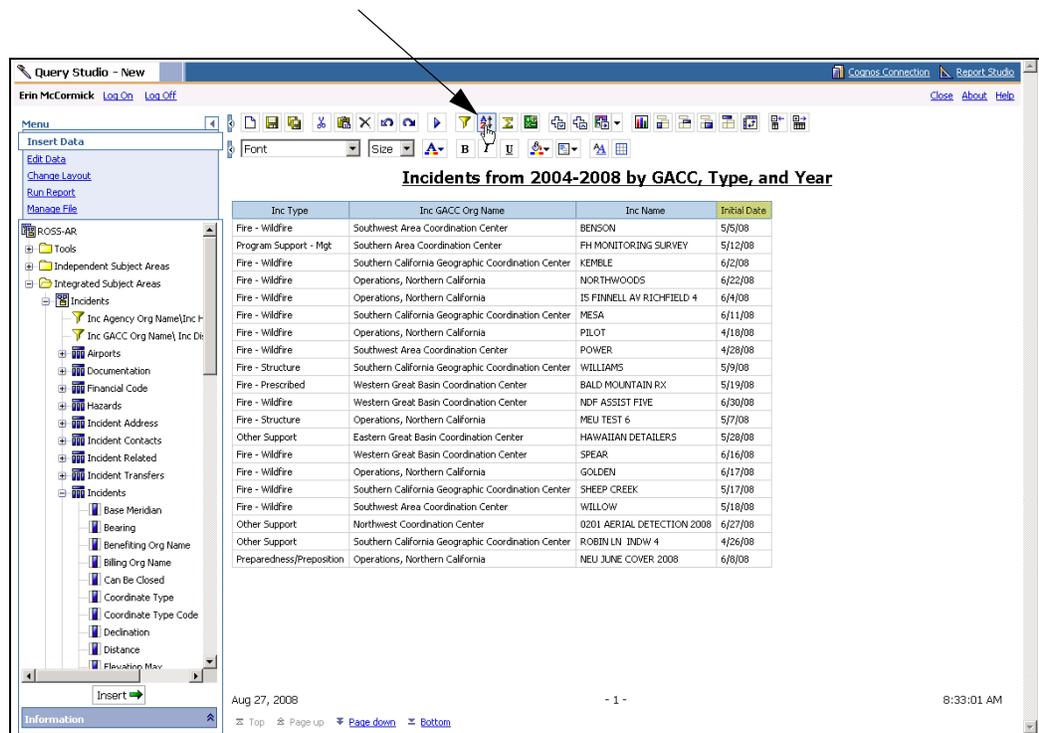

To sort report values

- On the **Query Studio** report of your choice, to select the **column heading** of your choice, and then click the **Sort** button.

The following diagram shows a sample report. The arrow points to the Sort button.

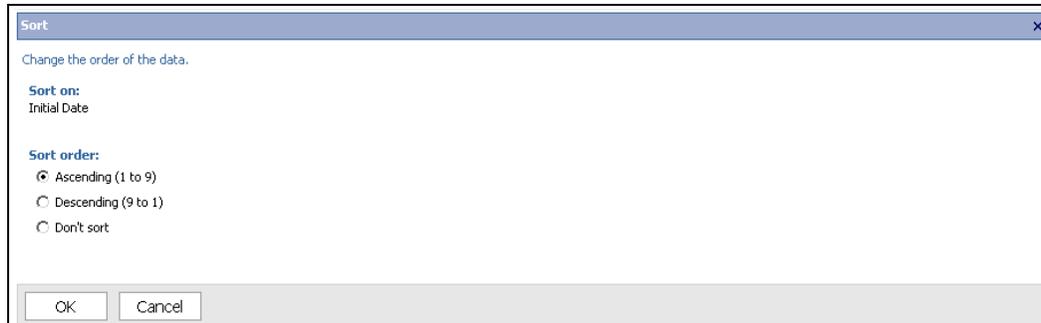

To change the default sort order of the column

- 1 On the **Query Studio report** of your choice, click the **sort subtitle** of your choice.

*To display sort subtitles, click the **Title**, and then click to select the **Show sorts** check box on the **Edit title area** screen.*

- 2 On the **Sort** screen, click to select the **Sort order** option of your choice, and then click **OK**.

The following diagram shows the Sort screen.

To group report values

Grouping report values allows you to hide duplicate values. You cannot group measures (quantitative data).

- On the **Query Studio report** of your choice, to select the **column heading** of your choice, and then click the **Group** button.

The following diagram shows a sample report *before* grouping the Inc GACC Org Name column.

Incidents from 2004-2008 by GACC, Type, and Date

To group a span of report values - an example

This example explains how to filter for Contract Start Dates beginning in June, 2008 and ending in September, 2008. Next, you will group this "span" (known as "range" in Cognos) of report values to hide the duplicates.

- 1 Create the **Query Studio** report of your choice.

This example lists Contract Number, Contract Type, Contract Start Date, Contract End Date, and Contract Org Name.

- 2 Under **Menu**, click the **Edit Data** submenu.

- 3 Click to select **Contract Start Date**, and then click the **Filter** button.

- 4 On the **Filter** screen, complete the following information and then click **OK**

- click the **Conditions** drop-down arrow and then click to select **Show only the following**
- in the **From Date** text box, click the **calendar**, and then click to select **June 1, 2008**
- in the **To Date** text box, click the **calendar**, and then click to select **September 30, 2008**.

- 5 Click the **Group** button.

Since you applied the filter from the previous step to the Contract Start Date, this column heading should already be selected.

The following diagram shows a sample report and the Filter screen. The arrows point to the filter used for this example.

Contracts from June, 2008 through September, 2008

Contract Number	Contract Type	Contract Start Date	Contract End Date	Contract Org Name
ICA07 - Keith Whitehead	Call When Needed	Aug 9, 2007 12:00:00 AM	Sep 30, 2009 12:00:00 AM	Oregon Dept. of Forestry Coordination Center
ICA07 - Professional Reforestation	Call When Needed	Aug 9, 2007 12:00:00 AM	Sep 30, 2009 12:00:00 AM	Oregon Department of Forestry Salem Office
ICA07 - JO International	Call When Needed	Aug 9, 2007 12:00:00 AM	Sep 30, 2009 12:00:00 AM	Southern Oregon Area Dispatch Center

To calculate quantitative report values

The results of the calculation creates a new column in your report. Cognos performs a re-calculation each time the report is run.

- 1 On the **Query Studio** report of your choice, to select the **column heading** of your choice, and then click the **Calculate** button.

You may select multiple report items for your calculation, such as First Name and Last Name. For more information see the next task, "To perform a calculation on multiple report values."

- 2 On the **Calculate** screen, click the **Operation** drop-down arrow, and then click to select the **operation** of your choice.
- 3 Based on the column heading you selected, complete the **Calculate** screen as appropriate.

The operations available depend on the type of data (alphanumeric, numeric, date) in the column heading(s) you select.

- 4 In the **New item name** box, type the **name of the new column heading**, as appropriate, and then click the **Insert** button.

You can, if desired, delete the report item used for the calculation as it is no longer needed.

The following diagram shows a sample report *before* performing a calculation on the Initial Date column.

Incidents from 2004-2008 by GACC, Type, and Date			
Inc GACC Org Name	Inc Type	Inc Name	Initial Date
APHIS National Dispatch Center	Animal Health Emergency	RITA-LA-2005	9/11/07

To concatenate multiple report values - *an example*

The sample screens in this task shows how to create a new column that lists Last Name, First Name.

- 1 On the **Query Studio** report of your choice, click to select the **column headings** of your choice, and then click the **Calculate** button.
- 2 On the **Calculate** screen, click the **Operation** drop-down arrow, and then click to select **Concatenation**.
- 3 Under **New item name**, type the name of the **new column heading**.
- 4 Under **Separator between report items**, click to select the **separator** of your choice, or type the **separator** of your choice in the text box.

In this example, a comma followed by a space is used to separate Last Name from First Name.

- 5 Complete the following text boxes as appropriate, and then click the **Insert** button.

- Preceding text
- Following text.

- 6 To delete the source report values used in the concatenation, click to select the **column headings** of your choice, and then click the **Delete** button.

The following diagram shows a sample report of resource names. The column headings, “Last Name” and “First Name,” are selected for the calculation.

List of Resources by Dispatch Organizations and Home Location

[Res Disp Org Name: Ascending order](#)

Last Name	First Name	Res Disp Org Name ^	Home Loc Name
PHILLIPS	AARON	APHIS Eastern Dispatch Center	W5 State Director Office - OH (OH-AWAO)

To summarize report values without footers

The type of summary you can perform depends on the type of data you select. It is a form of calculation that condenses (summarizes) your data. In this example, the Inc Name column is summarized to display counts instead of individual incident names.

- 1 On the **Query Studio report** of your choice, click the **Edit Data** submenu.
- 2 Click to select the **column heading** of your choice, and then click the **Summarize** link.
- 3 On the **Summarize** screen, click the **Advanced** link.
- 4 On the **Summarize (advanced)** screen, click the **Summary for cells** drop-down arrow, and then click to select one of the following
 - Count Distinct
 - Count
 - None.

*For this example, click to select **Count**.*

- 5 Click the **Summary for footers** drop-down arrow, click to select one of the following, and then click **OK**
 - Total
 - Average
 - Maximum
 - Minimum
 - Median
 - Standard Deviation
 - Variance
 - Count Distinct
 - Count
 - Calculated
 - Automatic
 - None.

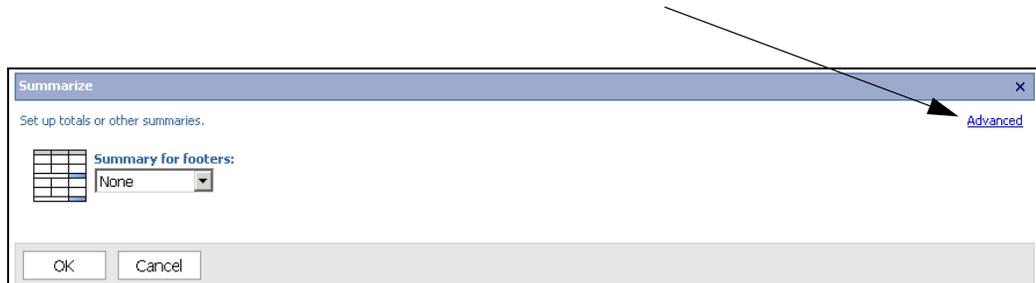

*For this example, click to select **None**.*

- 6 Rename the **Title** and **column heading** as appropriate.

The following diagram shows a sample report *before* summarizing the Inc Name column.

Inc Type	Inc GACC Org Name	Inc Name	Initial Date
Fire - Wildfire	Southwest Area Coordination Center	BENSON	5/5/08
Program Support - Mgt	Southern Area Coordination Center	FH MONITORING SURVEY	5/12/08

To summarize report values with footers

In this example, the Inc Name column displays counts. The footer displays the total number of incidents.

- 1 On the **Query Studio** report of your choice, click the **Edit Data** submenu.
- 2 Click to select the **column heading** of your choice, and then click the **Summarize** link.
- 3 On the **Summarize** screen, click the **Advanced** link.
- 4 On the **Summarize (advanced)** screen, click the **Summary for cells** drop-down arrow, and then click to select one of the following
 - Count Distinct
 - Count
 - None.

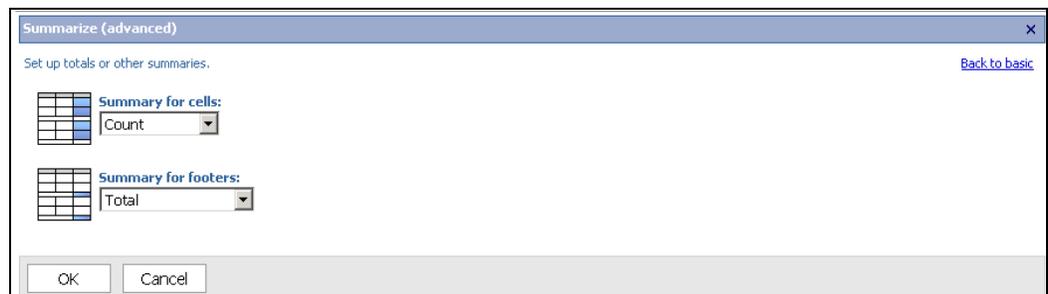

*For this example, click to select **Count**.*

- 5 Click the **Summary for footers** drop-down arrow, click to select one of the following, and then click **OK**
 - Total
 - Average
 - Maximum
 - Minimum
 - Median
 - Standard Deviation
 - Variance
 - Count Distinct
 - Count
 - Calculated
 - Automatic
 - None.

*For this example, click to select **Total**.*

- 6 Rename the **Title** and **column heading** as appropriate.

The following diagram shows a sample Summarize (advanced) screen for displaying the total number of incidents.

The following diagram shows the Summary row that displays on the last page (bottom) of the report.

Changing the look and feel of your Query Studio report

The Change Layout submenu allows you to change the look and feel of your report. You can perform the following:

- cut and paste or delete columns of data
- change column headings, fonts, or borders
- change the title
- set page breaks and number of rows per page
- swap rows and columns
- create sections and subsections.

To cut and paste a column

- 1 On the **Query Studio** report of your choice, click the **Edit Data** submenu.
- 2 Click to select the **column heading for the report item** you want to cut, and then click the **Cut** link.

- Click to select the **column heading** where you want to paste the **cut report item**, and then click the **Paste** link.

*The cut column will be pasted **before** the column you select.*

The following diagram shows a sample report with the column heading, "Initial Date" selected. The arrow points to the Cut link on the Edit submenu.

The screenshot shows the Cognos Query Studio interface. The main report area displays a table with the following data:

Inc Type	Inc GACC Org Name	Inc Name	Initial Date	Year
Fire - Wildfire	Southern California Geographic Coordination Center	KEMBLE	6/2/08	2008
Fire - Wildfire	Southwest Area Coordination Center	FORTIFICATION	6/5/08	2008

To delete a column

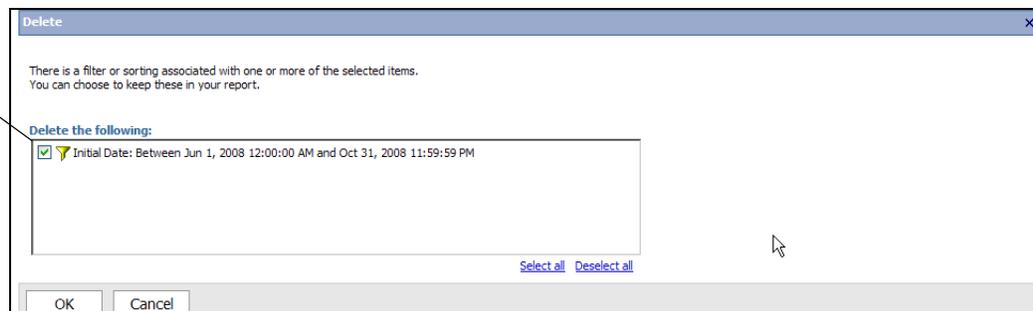

If you choose to delete a column that has a filter applied to it, you must either delete the column but keep the filter, or delete both the column and the filter.

- 1 Click to select the **column heading** of your choice, and then click the **Delete** button on the **Query Studio Standard** toolbar.
- 2 To keep the filter, if one is applied to the selected column heading, click to clear the **check box for that filter** on the **Delete** screen.

*To delete the filter, click **OK** on the **Delete** screen.*

The following diagram shows a sample Delete screen for deleting a column with a filter applied to it. The arrow points to the check box to clear if you want to delete the column but do not want to delete the filter.

To change a report item heading

- 1 On the **Query Studio report** of your choice, double-click the **column heading** of your choice.
- 2 On the **Rename** screen, type the **new name of the column heading** in the **Name** box, and then click **OK**.

The following diagram shows the Rename screen.

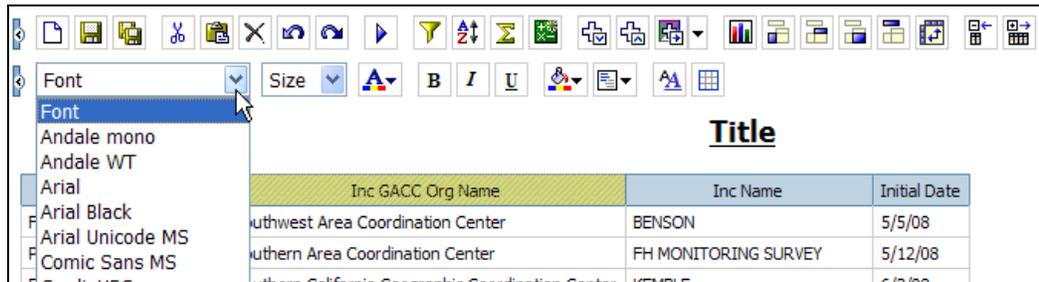

To change the report text font, size, and formatting

- 1 On the **Query Studio report** of your choice, click to select the **column heading**, **Title**, or other **heading** of your choice.
- 2 To change the font, click the **Font** drop-down arrow on the **Query Studio Standard** toolbar, and then click to select the **font** of your choice.

- 3 To change the size of the font, click the **Size** drop-down arrow on the **Query Studio Standard** toolbar, and then click to select the **font** of your choice.
- 4 To change the formatting, click the **Bold**, **Italic**, and/or **Underline** buttons on the **Query Studio Standard** toolbar.

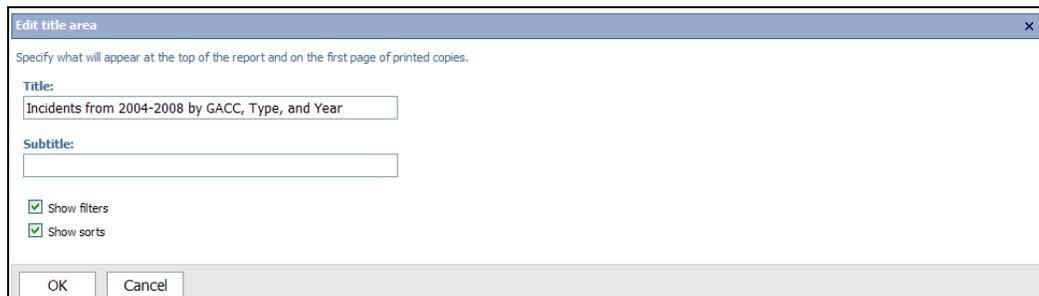

The following diagram shows a partial list of fonts available in Query Studio.

To change the report title

- On the **Query Studio** report of your choice, click the **report title**, and then complete the **Title** box as appropriate.

The following diagrams shows the Edit title area screen.

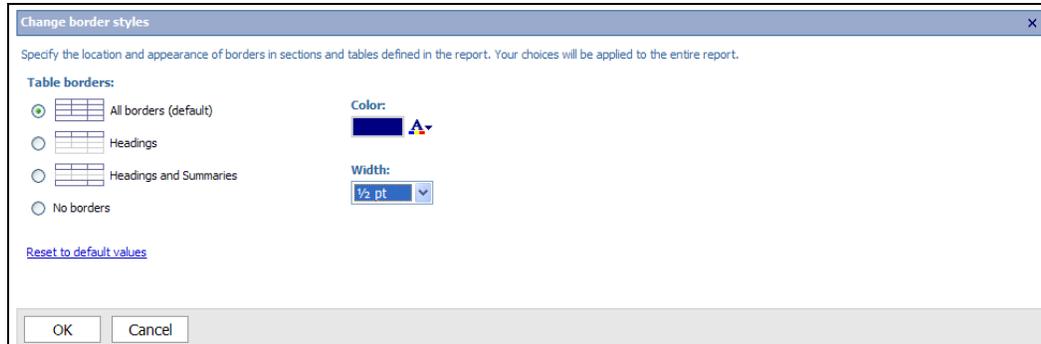

To add or change borders in your report

- 1 On the **Query Studio** report of your choice, click the **Change Layout** submenu.
- 2 On the **Change Layout** submenu, click the **Change Border Styles** link.
- 3 On the Change border styles screen under **Table borders**, click to select one of the following borders
 - All borders
 - Headings
 - Headings and Summaries
 - No borders.
- 4 Under **Color**, click the drop-down arrow, and then click to select the **border color** of your choice.

- 5 Click the **Width** drop-down arrow, and then click to select the **border width** of your choice.
- 6 When finished, click **OK**.

The following diagram shows a sample Change border styles screen.

To set page breaks in your report

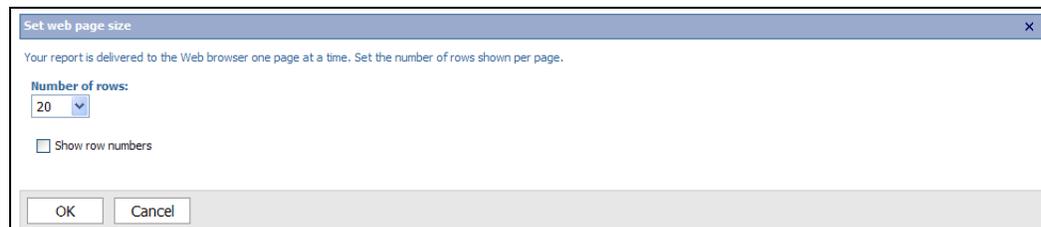

To set page breaks in a list report, you must select one grouped or sectioned report item.

- 1 On the **Query Studio report** of your choice, click the **Change Layout** submenu.
- 2 On the **Change Layout** submenu, click the **Set Page Breaks** link.

To set the number of rows per page

- 1 On the **Query Studio report** of your choice, click the **Change Layout** submenu.
- 2 On the **Change Layout** submenu, click the **Set Web Page Size** link.
- 3 On the **Set web page size** screen, click the **Number of rows** drop-down arrow, and then click to select the **number** of your choice.

The following diagram shows the Set web page size screen.

To show row numbers in your report

- 1 On the **Query Studio** report of your choice, click the **Change Layout** submenu.
- 2 On the **Change Layout** submenu, click the **Set Web Page Size** link.
- 3 On the **Set web page size** screen, click the **Show row numbers** check box, and then click **OK**.

To create a section

The report value you select becomes the heading of a section.

- 1 On the **Query Studio** report of your choice, click the **Change Layout** submenu.
- 2 Click to select the **first cell** in the column of your choice, and then click the **Create Sections** link.

*You may also click the **Create Sections** button on the **Query Studio Standard** toolbar.*

The following diagram shows a sample list report. The arrow points to Inc Type, which will be used to create a section.

Inc Type	Inc GACC Org Name	Inc Name	Initial Date	Year
Fire - Wildfire	Southern California Geographic Coordination Center	KEMBLE	6/2/08	2008

Working with Crosstab reports and charts

The Change Layout menu allows you to create a Crosstab report and/or a chart from the most summarized data of your report. Topics include:

- Creating a Crosstab report
- Creating a chart.

Creating a Crosstab report

Create a Crosstab report when your report displays the same rows for multiple report items, you want to swing the common rows up to become columns, and/or you want to show measures at the intersection of each row and column.

To create a Crosstab report of summarized values

- 1 Create and save the **Query Studio report** of your choice.
- 2 Summarize the **report cell(s)** of your choice.

- 3 Click to select the **column heading** to use as the common row, and then click the **Pivot** button on the **Query Studio Standard** toolbar.
- 4 Rename the report as appropriate, and then click **OK**.

The following diagram shows a sample report before pressing the Pivot button. Inc Name has been summarized and Year is selected as the common row.

Inc Type	Inc GACC Org Name	Inc Name	Year
Accident - Aircraft	Eastern Great Basin Coordination Center	1	2008
Accident - Aircraft	National Interagency Coordination Center	1	2008
Accident - Aircraft	Northern Rockies Coordination Center	1	2008
Accident - Aircraft	Northwest Coordination Center	1	2008
Accident - Aircraft	Operations, Northern California	1	2008
Accident - Aircraft	Southern California Geographic Coordination Center	2	2008
Accident - Marine	Southern California Geographic Coordination Center	1	2008
Accident - Rail	Southern California Geographic Coordination Center	1	2008
Accident - Structure	Southern California Geographic Coordination Center	2	2008
Accident - Vehicle	Northwest Coordination Center	1	2008
Accident - Vehicle	Operations, Northern California	10	2008
Accident - Vehicle	Southern California Geographic Coordination Center	57	2008
Animal Health Emergency	APHIS National Dispatch Center	1	2007
Animal Health Emergency	APHIS National Dispatch Center	2	2008
Animal Health Emergency	Southern California Geographic Coordination Center	2	2008
Earthquake	Operations, Northern California	1	2008
Earthquake	Southern California Geographic Coordination Center	1	2008
Earthquake	Western Great Basin Coordination Center	1	2008
Emergency Stabilization/BAER	Eastern Great Basin Coordination Center	1	2008
Emergency Stabilization/BAER	Operations, Northern California	5	2008

The following diagram shows the resulting Crosstab report.

Inc Name	2008	2007	2005	2006	Summary
Fire - Wildfire					
Operations, Northern California	1641	3			1644
Northwest Coordination Center	914	3			917
Southwest Area Coordination Center	823	5			828
Northern Rockies Coordination Center	441	1			442
Western Great Basin Coordination Center	180	12			192
Alaska Interagency Coordination Center	58	4			62
Rocky Mountain Area Coordination Center	255	1			256
Eastern Great Basin Coordination Center	451	12			463
Sample GACC	14				14
Eastern Area Coordination Center	147	1			148
Southern Area Coordination Center	159	20			179
Southern California Geographic Coordination Center	1354	14			1368
Fire - Wildfire	6437	76			6513
Fire - Other					
Northern Rockies Coordination Center	4				4
Southern Area Coordination Center	2				2
Northwest Coordination Center	6				6
Southern California Geographic Coordination Center	11				11
Southwest Area Coordination Center	2				2
Operations, Northern California	23				23
Alaska Interagency Coordination Center	1				1

To sort a Crosstab report

- 1 Under **Menu**, click to select the **Edit Data** menu.
- 2 On the **Crosstab report** of your choice, click the **first cell of the column** you want to sort, and then click the **Sort** button.

To swap rows and columns

You can only swap rows and columns if your report contains a Crosstab or a chart based on a Crosstab.

- On the **Query Studio Crosstab report** of your choice (or a chart based on a Crosstab report), click the **Swap Rows and Columns** button.

The following diagram shows a portion of sample crosstab report before the swap.

Inc Name		Flooding	Fire - Wildfire	Fire - Wildland Fire Use	Preparedness/Preposition	Training - Classroom	Program Support - Resource	Fire - Other	Other Support	Fire - Vehicle	Training - OJT	Fire - Structure	S
Sample GACC	2008	1	14	1	1								
	Sample GACC	1	14	1	1								
Northwest Coordination Center	2007		3			1	1						
	2008	1	981	7	83	18	13	8	79	5	2	2	
	Northwest Coordination Center	1	984	7	83	19	14	8	79	5	2	2	
APHIS National Dispatch Center	2007												
	2008	3											
	APHIS National Dispatch Center	3											
Eastern Area Coordination Center	2007		1										
	2008	4	148		14	3	3		16				
	Eastern Area Coordination Center	4	149		14	3	3		16				
Operations, Northern California	2007		3		2				3				
	2008	2	1404	1	230	11	16	26	313	28	11	52	
	Operations, Northern California	2	1407	1	232	11	16	26	316	28	11	52

S & R - Medical Assist				2	2							20	20	

Creating a chart

The Change Layout menu allows you to create a chart from the most summarized data of your report. The report must have at least one measure (quantitative data) and one non-measure (qualitative data), but must have no more than two non-measures. The report may have unlimited measures. When creating a report to generate a chart, remember these key points:

- You must have at least one measure (quantitative data) and one non-measure (qualitative data) to create a chart.
- You can graph an unlimited number of measures, but a maximum of two non-measures.
- Remove measures not meaningful to the chart.
- Reorder non-measurement columns as needed.
- Collapse any groups.

To create a chart from your Query Studio report

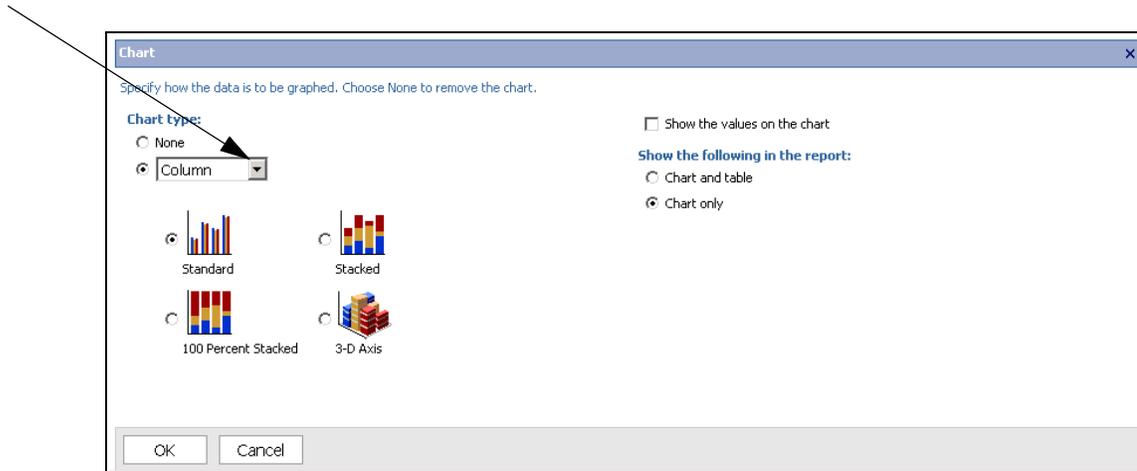

- 1 Create the **Query Studio report** of your choice, and then click the **Edit Data** submenu.

- 2 Perform the appropriate calculations and/or summarizations, and then remove non-meaningful measures and non-measures from the report.
- 3 On the **Query Studio Standard** toolbar, click the **Chart** button.
- 4 On the **Chart** screen, click the **Chart type** drop-down arrow, click to select one of the following chart options
 - Column
 - Column - Line
 - Bar
 - Area
 - Pie
 - Line
 - Radar.
- 5 Click to select the **Show the values on the chart** check box, as appropriate.
- 6 Under **Show the following on the report**, click to select one of the following, and then click **OK**
 - Chart and table
 - Chart only.

The following diagram shows a sample report of incident counts for the year 2007.

<u>Incidents in 2007 by Type</u>	
Inc Type	Number of Incidents
Accident - Aircraft	7
Accident - Marine	1
Accident - Rail	1
Accident - Structure	2
Accident - Vehicle	68
Animal Health Emergency	5
Earthquake	3
Emergency Stabilization/BAER	13
Fire - Debris/Product	12
Fire - Other	49
Fire - Prescribed	284
Fire - Structure	139
Fire - Vehicle	47
Fire - Wildfire	6514
Fire - Wildland Fire Use	44
Fire Rehabilitation	18
Flooding	19
Hazard - Biological/Toxic	12
Hazard - Explosive/Electric	23
Hazard - Flammable	4

The following diagram shows the Chart screen. The arrow points to the Chart type drop-down arrow.

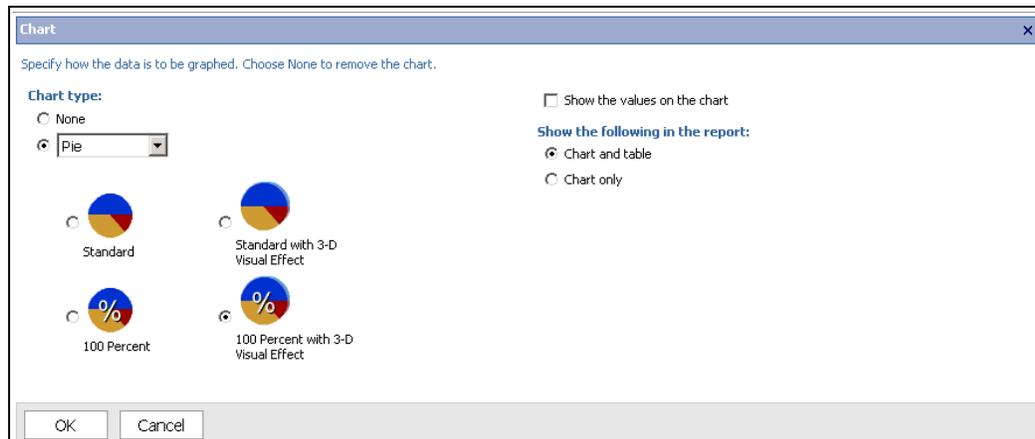

To create a pie chart - an example

This example uses the sample Query Studio report, "Incidents from 2004-2008 by GACC, Type, and Year," to plot the Number of Incidents (quantitative data) by Incident Type (qualitative data).

- 1 Create and save the **Query Studio report** containing the following data
 - Inc Type
 - Inc Name
 - Inc GACC Org Name
 - Initial Date.
- 2 On the **Menu**, click to select the **Edit Data** submenu.
- 3 Calculate the **Year**, change the heading to **Year**, and then filter to list only the year **2007**.
- 4 Summarize the **Inc Name** to count the number of incidents, and then change the column heading to **Number of Incidents**.
- 5 Delete the **Inc GACC Org Name** and **Year** columns.
- 6 On the **Query Studio Standard** toolbar, click the **Chart** button.
- 7 On the **Chart type** drop-down arrow, click to select **Pie**, click to select the **pie chart** of your choice, and then click **OK**.
- 8 Change the **title** to **Number of Incidents in 2007 by Type**.

The following diagram shows the Chart screen for creating a pie chart.

The following diagram shows the resulting pie chart from the sample report.
